Steps to be followed to developing your thesis report using LaTex template.

1. Download the “Thesis_content.zip” file from a valid source. Unzip the file and check the availability of the following contents.

```
├── acronym.tex
├── appendix
│   ├── publication.tex
│   └── sourcecode.tex
├── chapters
│   ├── chapter1.tex
│   ├── chapter2.tex
│   ├── chapter3.tex
│   ├── chapter4.tex
│   ├── chapter5.tex
│   ├── chapter6.tex
│   ├── chapter7.tex
│   └── chapter8.tex
├── execsummary.tex
├── images
│   ├── sample-graph.pdf
│   └── vit_logo.png
├── references.bib
├── thesis.pdf
├── thesis.tex
└── VITSCOPEThesis.cls
```

2. Go to Overleaf (https://www.overleaf.com/) and log in. You can use either Google / ORCID / IEEE accounts to authenticate. If not, go to Register and create an account in Overleaf.
After successful login, the system will navigate to the Overleaf project page. Refer to Figure 1.

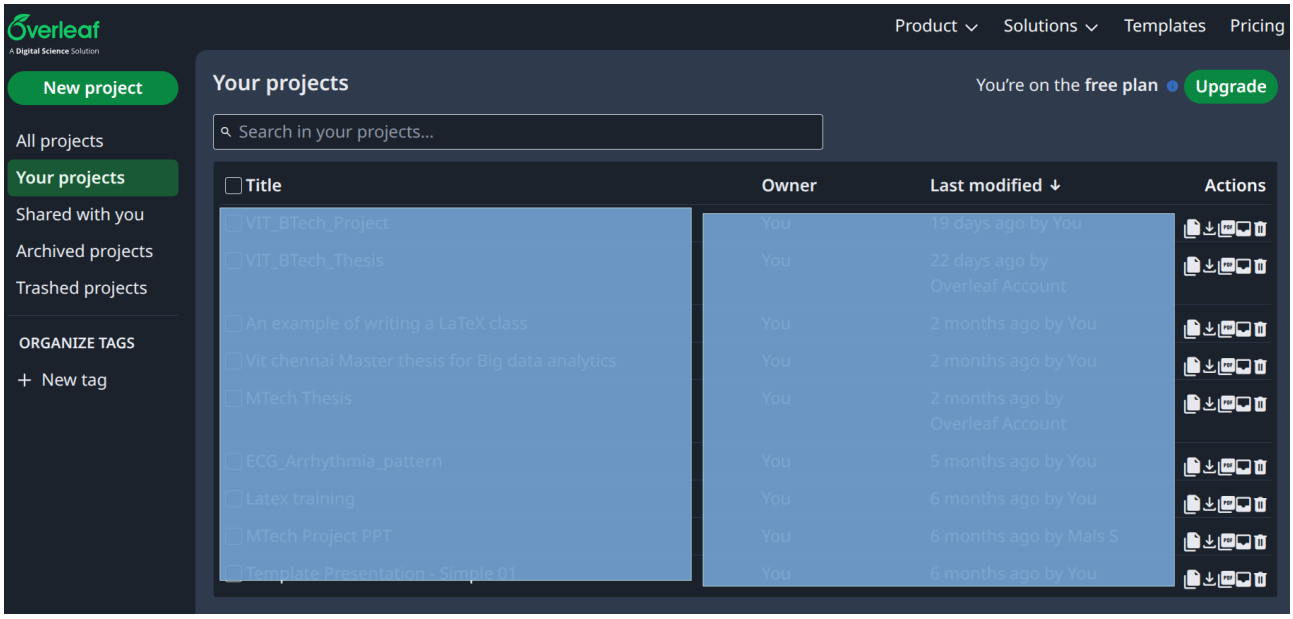

Figure 1: Project home page

3. In the next step, click the “New project” option and choose the "Upload project” option. Refer to Figure 2. In the Upload zipped project, click the “Select a .zip file” and choose the “Thesis_content.zip” from your system.

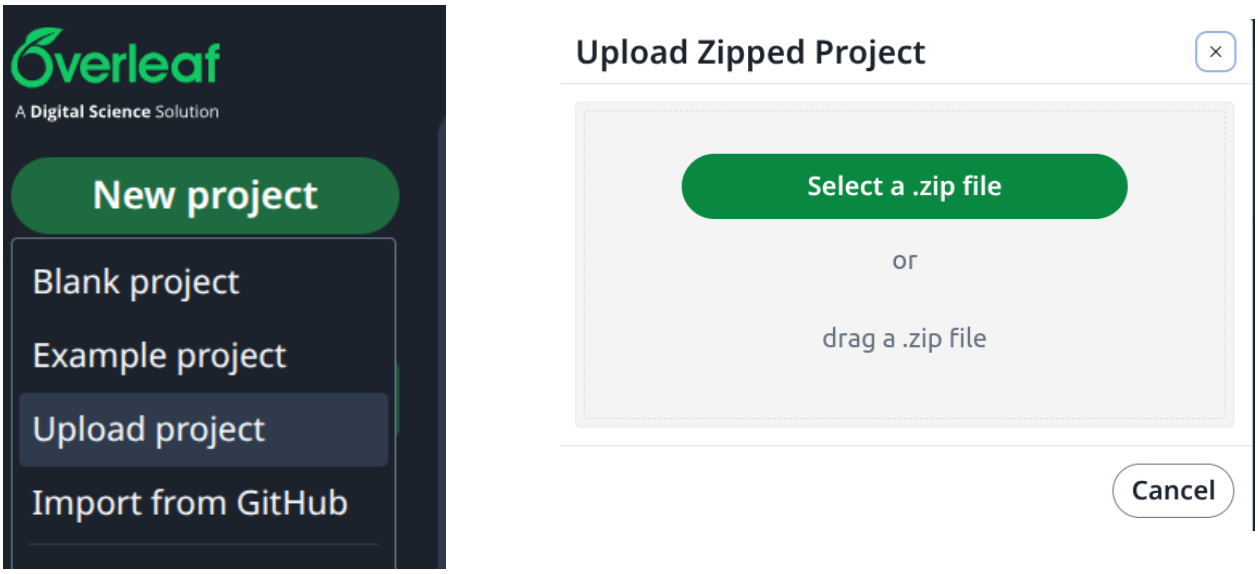

Figure 2: Upload project selection

4. After a successful upload, Overleaf will show the project content as shown in Figure 3.

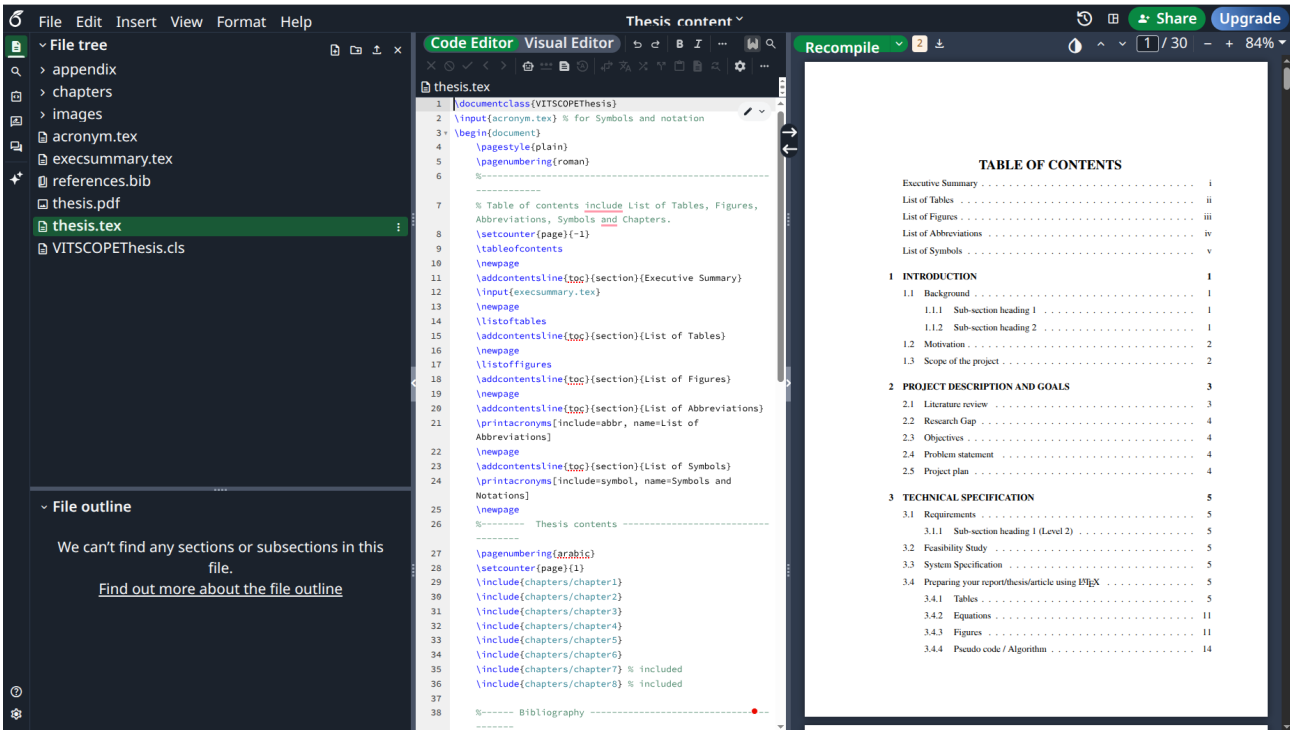

Figure 3: Thesis content page

5. Folders, Files, and their purpose were specified in the table below.

Folder	**File**	**Purpose**
	acronym.tex	All symbols, acronyms should be specified
	execsummary.tex	Executive summary of your thesis should be added.
	references.bib	All reference (BIBLIOGRAPHY) items must be added in this file.
	thesis.pdf	Your thesis report file (output)
	thesis.tex	The main file to compile your entire thesis. Do not change anything in this file!
	VITSCOPEThesis.cls	The sytle file to change your thesis appearances. Do not change anything in this file!
appendix	publication.tex	Specify your Journal and/or Conference publications details.
	sourcecode.tex	Specify your source related to project.
chapters	chapter1.tex	project introduction contents.
	chapter2.tex	project description and goals.
	chapter3.tex	project technical specification.
	chapter4.tex	System Design contents.
	chapter5.tex	Methodology and testing contents.
	chapter6.tex	Project implementation contents
	chapter7.tex	Results and discussion contents.
	chapter8.tex	Conclusion and further enhancements content.
images		Add your project related images in the image folder and specify the appropriate file path in your project.

Read the purpose and add your project content in the appropriate file to refelect.

6. Finally, if you save your project (press ctrl+s key) or the “Recompile” option in the output window, Overleaf will recompile and show the final pdf generated.

7. Once your thesis report contents are finalised, you can download your thesis content as a zip file by navigating to the File menu and select the Download as source (zip) option shown in Figure 4.

8. After successful download of your project thesis content (“Thesis_content.zip”) from overleaf, upload the same in the Thesis report submission portal (will be shared). *Note: Please note that your thesis will be rebuild to include Cover page, declaration page, certificate page, and ackowledgement pages to your thesis report. Further updates will be shared with you to build your final thesis report for verification.*
